Build a Digital Signage Playlist on TV Without a New Media Player

One screen moving through the content you prepared, in the order the room needs.

A TV showing one playlist item with an ordered Queue on a separate controller. Product example.

1. Open vuthis.com on the TV or projector

Open vuthis.com in the display browser. For a projector, use its browser or the computer already connected to it. Keep the connection code on screen.

Result: The screen is ready for a controller.

2. Connect your phone, tablet or laptop

Scan the screen QR code with your phone. On a laptop or tablet, open vuthis.com/r and enter the screen code. Both devices need internet; they can use different networks.

Result: The content controls are on your device.

3. Create content and choose Add to queue

Prepare an item in its feature, then choose Add to queue instead of Show now. Repeat for the photos, PDF, notice, clock, timer or QR code the display needs.

Result: Your screen content is collected in Queue.

Use the controls. Check the result.

4. Drag the Queue into the right order

Arrange the items in the sequence the audience should see. Remove outdated items. Use an item's Show now when something needs the screen immediately.

Result: The running order matches your event or venue.

5. Choose manual play, Auto and Loop

Use Play queue for manual progression. Turn Auto on for automatic advance, set Seconds per item and enable Loop when the sequence should repeat.

Result: The display follows your chosen playback pattern.

6. Preview the whole sequence

Watch the transitions. Slideshows and countdowns can hold Auto until their own finish; ordinary items use the Queue timing. The display continues until the V U This session ends.

Result: The screen is ready for the audience.

Keep it ready for the room

- Queue is a Pass feature in the current product.

- Use the usable browser already available on the TV or its connected device. Preview timing and session duration for the planned display period.

Open the working product

Open vuthis.com on your display | Connect with the screen code
