Display a Website QR Code on TV for Menus, Agendas and Feedback

One clear code on the screen, taking guests to the page they need.

A large QR code on TV with a caption and separate controller fields. Product example.

1. Open vuthis.com on the TV or projector

Open vuthis.com in the display browser. For a projector, use its browser or the computer already connected to it. Keep the connection code on screen.

Result: The screen is ready for a controller.

2. Connect your phone, tablet or laptop

Scan the screen QR code with your phone. On a laptop or tablet, open vuthis.com/r and enter the screen code. Both devices need internet; they can use different networks.

Result: The content controls are on your device.

3. Choose QR code, then URL

Choose the QR-code feature and select URL for a web page. Use the current product interface for access to this feature.

Result: The QR code is set up for a website link.

Use the controls. Check the result.

4. Enter the full destination address

Enter the complete https:// or http:// address for the menu, agenda, form or other page. Check that it opens for the intended audience.

Result: The destination is correct.

5. Add a caption and choose Show now

Use a caption that explains the result, such as View today's agenda or Tell us how we did. Show the code on the display.

Result: Visitors know why they should scan.

6. Test from the audience position

Scan the displayed code with a separate phone. Confirm that it opens the intended page and the useful information is accessible.

Result: The code leads to the right next action.

Keep it ready for the room

- QR-code display is a Pass feature in the current product. Check the product interface when preparing the screen.

- The linked website provides the form or menu. V U This puts its QR code on the shared display.

Open the working product

Open vuthis.com on your display | Connect with the screen code
